Please note that, the table for personal loans does not include loan installments as some of the loans above are repaid in installments from the loan amount of UGX100,000 and above, loan installment is obtained by dividing the number of installments by the total amount of loan to be repaid and then by the number of days per the loan, for example if you take a loan of UGX500,000 which has 5 installments, you will then have 5 installments divide by total loan amount to be repaid which is 580,000 and you will have a total of UGX116,000, thereafter, we will have then divide total period which is 30 days by the installment number which is 5 installments and we will have 6, this means that you will be required to repay your loan with amount of UGX116,000 after every six days .

Loan processing fee is the amount of money we charge to process your loan and is repaid when you are repaying your loan, this means that you receive the actual loan you asked for in its full amount. We use the loan processing fee to communicate with you via text messaging to remind you about your repayments and do other operations like to cover your charges for transactions from the loan account.

Please note that, there might be other charges that may be imposed to you from your financial service provider when repaying the loan, especially the mobile money or banks may charge you depending on the amount you are repaying and which payment method.
